

MONI AI - Warehouse Receiving Procedure (Operations)

Audience: warehouse and production staff.

1. Unloading. Count every pallet against the delivery note before signing it.
2. Discrepancies. Record a short delivery in Odoo the same day and photograph the pallet before it is put away.
3. Quarantine. Damaged goods go to the QUARANTINE bay and are not booked into stock.
4. Put-away. The receiving operator picks the location; the system confirms it.
5. Escalation. Any discrepancy above ten units is reported to the warehouse manager.
